

Dear github managers, my English name is Manistein, I am a Chinese. My english is not very well, but i will try my best to complete my takedown-notice, and i wish you can read what I write. At this time, **I have read and understand GitHub's Guide to Filing a DMCA Notice.**

Today, when I serving web, I find an article name "skynet源码分析" ([url:<http://blog.shixbo.com/2018/01/24/skynet%E6%BA%90%E7%A0%81%E5%88%86%E6%9E%90/>](http://blog.shixbo.com/2018/01/24/skynet%E6%BA%90%E7%A0%81%E5%88%86%E6%9E%90/)), after open it. I fill so angry because, the content of that article is the same as one of my article which is name "skynet源码赏析" ([url:<https://manistein.github.io/blog/post/server/skynet/skynet%E6%BA%90%E7%A0%81%E8%B5%8F%E6%9E%90/>](https://manistein.github.io/blog/post/server/skynet/skynet%E6%BA%90%E7%A0%81%E8%B5%8F%E6%9E%90/)), I am very sure that it is the copy of "skynet源码赏析" without quote the source and no inform me. It is an absolutely an infringing content! It just change the name of the article!

I can find the infringer's github url in his/her website, his/her github name is flesh0731(url:<https://github.com/flesh0731>)

I have several evidence to prove that I am the real author of "skynet源码赏析" which is rename as "skynet源码分析" by flesh0731. Before I list all the evidence, maybe it's important to explain why I am sure that submit this compliant to github is the correct approach. My blog website is running on github server, which I use Hugo, a static website generator, to generate the static website. I create a repository at github(url:<https://github.com/Manistein/blog>) on 27 Aug 2017, and I also create two useful branch, master and gh-pages. Everytime I push my new content to gh-page branch, it can be find on my website <https://manistein.github.io/blog/>. As my blog website is running on github server, I use domain resolve website to resolve the domain name <http://blog.shixbo.com>. I also resolve my website domain name, I got these information below:

The screenshot shows a search interface for domain resolution. The search bar contains "blog.shixbo.com". Below the search bar is a message: "IP/域名blog.shixbo.com的信息" and "如果该IP实际地址与我们所记录的不符,请[更改IP地址](#)帮助我们更好地为您服务!" A table lists four IP addresses associated with the domain:

域名/IP	获取的IP地址	数字地址	IP的物理位置
blog.shixbo.com	185.199.110.153	3116854937	欧洲和中东地区
blog.shixbo.com	185.199.111.153	3116855193	欧洲和中东地区
blog.shixbo.com	185.199.108.153	3116854425	欧洲和中东地区
blog.shixbo.com	185.199.109.153	3116854681	欧洲和中东地区

At the bottom, it says "最近查询: www.fixporn.com www.fixbayonets.me www.fizsat.cn 117.136.74.172 www.finchklowtravels.com 118.122.121.17"

The screenshot shows a search interface for domain resolution. The search bar contains "manistein.github.io". Below the search bar is a message: "IP/域名manistein.github.io的信息" and "如果该IP实际地址与我们所记录的不符,请[更改IP地址](#)帮助我们更好地为您服务!" A table lists four IP addresses associated with the domain:

域名/IP	获取的IP地址	数字地址	IP的物理位置
manistein.github.io	185.199.108.153	3116854425	欧洲和中东地区
manistein.github.io	185.199.109.153	3116854681	欧洲和中东地区
manistein.github.io	185.199.110.153	3116854937	欧洲和中东地区
manistein.github.io	185.199.111.153	3116855193	欧洲和中东地区

At the bottom, it says "最近查询: 117.136.97.121 110.184.242.247 ckdsp.qerfjk.cn csldf.erqqc.cn 223.85.29.112 move.hgjhbiwwwcb.com.cn"

the result ip address is the same of mine. so I am sure that flesh0731's blog is also running on github. According to github's guideline, if my takedown notice is pass, you will disable the page which is infringing me.

At first, I write "skynet源码赏析" on YNote, but for some reason, we can not visit it via this url(<https://note.youdao.com/share/?id=9d2b8a03fdd9cd4947ca4128d30af420&type=note#/>), it is a share url, but i can provide its create information

对于skynet，需要澄清的几个问题

- skynet本质上解决什么问题？
- skynet有哪些基本的数据结构？
- skynet有几类线程，它们分别的作用是什么？
- skynet如何启动一个业务服务？
- skynet消息调度机制是怎么样的？
- skynet如何启动一个心跳服务？
- skynet消息层消息派发机制是怎么样的？
- timer是如何产生消息的？他的结构和流程是怎样的？
- 同步操作是如何产生消息的？他的结构和流程是怎样的？
- skynet有哪些共享服务，他们的作用分别是是什么？
- skynet集群机制

Overview

对于skynet的阐述，建议大家先阅读云风大侠的《[skynet设计浅谈](#)》，skynet到底是什么？它为我们提供了什么机制？如何正确使用它？我们希望自己的不同的业务逻辑，独立运行在不同的上下文环境中，并且能够通过某种方式，相互协作，最终共同服务于我们的玩家。skynet为我们提供了这种环境：

- 我们编写好的c文件，在编译成so库以后，在某个时刻，调用该so库api的句柄，会被加载到一个modules列表中，一般这样的模块会被要求定义四种接口 create, init, signalRelease。
- 我们想要做一个新的，运行在业务逻辑的上下文环境时，则从modules列表中，找到对应的so库句柄，并且使用create接口，创建一个该类业务模块的数据结构，并且创建一个上下文环境（context），引用该类业务的入口和它的数据结构，该context会被存放在一个统一的context对象的列表中，这样context被统一管理。
- 一个服务，默认不执行任何逻辑，需要别人向它发出相应的逻辑（同时也是通过消息队列，告诉指派的服务，要执行什么样的事件），并在需要时返回给调用者，调用者往往也是其他服务、服务中的请求、商店和推送，并不是直接使用对方的api来执行，而是通过一个消息队列，也就是说，不论是谁请求，回包还是推送，都需要通过这个消息队列发送到另一个服务中，skynet的消息队列，分为两类，一个全局消息队列，他包含一个主要是点钟，分别指向两个隶属于指定服务的次级消息队列，skynet中的每一个服务，都有一个唯一的、专属的次级消息队列。
- skynet一共有4种线程，monitor线程用于检测节点内的消息是否堵住，timer线程进行定时器，socket线程进行网络数据的收发，worker线程负责对消息队列进行调度（worker线程的数量，可以通过配置指定）。消息调度规则是，每条worker线程，每次从全局消息队列中pop出一个次级消息队列，并

it create at 2017-04-02

Since the share link of this article is not available, I first push it to my blog repository on on 29 Aug

2017(url:<https://github.com/Manistein/blog/blob/35e37f87016f6716ecf69314b4fc23cfa014ede/content/post/server/skynet/skynet%E6%BA%90%E7%A0%81%E5%88%86%E6%9E%90>

<https://github.com/Manistein/blog/blob/3c9ad6bea087a197f7b05fd5acc44882336cad/post/server/skynet/skynet%E6%BA%90%E7%A0%81%E5%88%86%E6%9E%90>

while at flesh0731's repository, the article's first push time is on 25 Jan 2018

(<https://github.com/flesh0731/flesh0731.github.io/blob/8b8263a56633b13251ce12447f5f274cd1168e8e/2018/01/25/skynet%E6%BA%90%E7%A0%81%E5%88%86%E6%9E%90>

The first evidence is my article is publish earlier than infringer.

As the

url(<https://github.com/flesh0731/flesh0731.github.io/blob/8b8263a56633b13251ce12447f5f274cd1168e8e/2018/01/25/skynet%E6%BA%90%E7%A0%81%E5%88%86%E6%9E%90>)

show above, just visit it, there are many image url is direct to my another repository the Photo

repository (https://github.com/Manistein/Photos/tree/master/DailyUse/skynet_study) ,back to the flesh0731's article, we can easy to find that all the iamge it use is from my Photo repository

```
